

## PDA Training

As PDA testing is a key quality assurance tool for many foundation engineering projects, it is essential that testing personnel and office staff undertaking review and analysis are both appropriately experienced and trained. Experience is gained by years of industry experience, or may be fast-tracked by mentoring of an experienced engineer. However, the necessary knowledge and skills can be learnt by formal training opportunities.

Foundation QC is committed to the improvement of skill levels in the PDA industry, and provides a range of training opportunities to assist testers and testing companies become more qualified and achieve certification under the High Strain Dynamic Pile Testing Examination

Please select from the PDA Training menu items at the left of screen.
